Introduction

When the 1970s rolled into the 1980s, the automotive landscape was undergoing a radical shift. European manufacturers were pushing the boundaries of design, technology, and engineering, and France's Citroën was at the forefront of that movement. Among its most celebrated creations was the Citroën CX, a flagship model that blended avant garde styling with pioneering technology. Within the CX family, the **Citroën CX Strim** emerged as a distinctive offering, catering to drivers who sought a refined blend of performance, comfort, and understated luxury. This article explores the history, design, engineering, and legacy of the Citroën CX S, providing a comprehensive guide for enthusiasts, collectors, and anyone intrigued by this iconic French automobile.

The Birth of the Citroën CX

Citroën first unveiled the CX concept in 1975, a bold departure from the company's traditional lineup. The name "CX" was short for "Citroën X," a reference to the company's ambition to create a new class of executive cars. By 1978, the production model hit the roads, and it quickly became a symbol of French innovation. The CX was notable for its:

- All new front wheel drive layout, a first for Citroën's front engined cars.
- Advanced hydropneumatic suspension, delivering a smooth, car like ride.
- Aerodynamic bodywork that reduced drag and improved fuel economy.
- High quality interior materials, reflecting a luxury aesthetic uncommon in its segment.

Throughout its production run, which lasted until 1991, the CX evolved through several facelifts and powertrain updates. The **Citroën CX Strim**, introduced in the early 1980s, represented a mid range offering that balanced affordability with premium features.

What Is the Citroën CX S?

The "S" in the Citroën CX S designation stands for "Sport" or "Standard," depending on the market. In most European countries, the CX S was positioned as the entry level model in the CX lineup, featuring:

- A 2.0 liter inline four engine, typically producing around 100 horsepower.
- Front wheel drive with a 4 speed manual gearbox.
- Standard suspension with the hydropneumatic system, but with fewer luxury options than higher trims.
- Basic interior amenities, such as vinyl upholstery and manual climate control.

Despite its modest specifications, the CX S retained the hallmark Citroën traits: smooth handling, excellent ride comfort, and a distinctive design language that set it apart from competitors.

Design and Styling

Exterior Aesthetics

The Citroën CX S showcased the brand's signature aerodynamic styling. Key design elements included:

- Curved roofline that tapered into a gently sloping rear, reducing aerodynamic drag.

- Integrated front and rear bumpers with a subtle grille, creating a streamlined silhouette.
- Large, round headlights that were both functional and emblematic of Citroën's futuristic approach.
- Optional alloy wheels, giving the CX S a more upscale appearance.

These design choices not only enhanced the vehicle's visual appeal but also contributed to its efficient performance, making the CX S a standout in the mid size segment.

Interior Comfort

Inside, the CX S offered a cabin that prioritized passenger comfort. Highlights included:

- Soft, supportive seats with ample lumbar support.
- High quality materials, such as leather trimmed steering wheel and dashboard accents.
- Dual zone climate control, allowing front and rear passengers to adjust temperature independently.
- Quiet cabin environment, thanks to the hydropneumatic suspension's shock absorbing capabilities.

While the CX S lacked some of the high tech features found in later CX models, its interior still felt refined, making it a popular choice among discerning buyers.

Technical Specifications

Engine and Performance

- 0–60 mph acceleration in roughly 12 seconds.
- Top speed of around 110 mph.
- Fuel economy of 25–28 miles per gallon, depending on driving conditions.

Although not a performance vehicle, the engine's smooth operation complemented the CX S's reputation for effortless driving.

One of the most celebrated features of the CX S was its hydropneumatic suspension system. This innovative setup offered:

- Self leveling capabilities, maintaining a consistent ride height regardless of load.
- Exceptional ride comfort, absorbing bumps and road imperfections with ease.
- Improved handling, thanks to the system's ability to adjust damping in real time.
